Nguyễn Hoàng Sơn

Android Developer · Kotlin & Jetpack Compose

0921 871 782
hoangsonng.0802@gmail.com
Ho Chi Minh City, Vietnam

SUMMARY

Android developer with 4+ years at MoMo, building features for one of Vietnam's largest fintech apps on Google Play. Works mainly in Kotlin and Jetpack Compose with MVVM and Clean Architecture, and also handles the Android side of the company's React Native app, from native modules to a full upgrade from version 0.64 to 0.81. Comfortable taking a feature from design review to release, then tracking it in production with Crashlytics and Analytics. Recent work includes an accessibility framework for font and layout scaling and an auto tracking system that covers more than 100 user actions.

TECHNICAL SKILLS

Languages	Kotlin (Advanced), Java, JavaScript · Coroutines, Flow, Kotlinx Serialization
Android UI	Jetpack Compose, Material Design 3
Architecture	MVVM, Clean Architecture (Data / Domain / Presentation), Unidirectional state with StateFlow
Jetpack	Navigation, Room, DataStore, Lifecycle, ViewModel
Networking & DI	REST / JSON, WebSocket, Retrofit, OkHttp, Ktor · Hilt, Dagger
Release & Monitoring	Google Play releases · Firebase Crashlytics, Analytics, Remote Config
Testing & Tools	JUnit, MockK, Unit Testing · Gradle, CI/CD, Git
Cross-platform	React Native (native modules, bridge, RN core fork), Kotlin Multiplatform (KMP/KMM)

WORK EXPERIENCE

M-Service (MoMo) · Mobile Developer

Dec 2021 to Present · Ho Chi Minh City

Auto Tracking Framework

Android · Jetpack Compose · Post-release monitoring

- Built a platform-level Android tracking framework hooking into lifecycle events, navigation and screen rendering, enabling automatic tracking for **100+ user actions**.
- Designed automatic `elementId` generation for Compose components to support UI testing.
- Gave product and engineering teams post-release visibility into user behavior without manual tracking code.

Font & Frame Scale Customization Framework

React Native fork · Android (Jetpack Compose)

- Implemented a unified font and frame scaling system for users with vision accessibility needs.
- Let users scale text and component sizes independently of OS settings.
- Built the native Android library (Compose) integrated with the React Native core fork; handled native-bridge communication for consistent, pixel-perfect rendering.

User Toolkit for Mini Apps

Jetpack Compose · Clean Architecture (MVVM) · StateFlow · Material Design 3

- Designed and implemented the complete feature in native Android, owning UI state, navigation, domain logic and data persistence.
- Implemented lifecycle-aware widgets and Material Design 3 components.

React Native Upgrade from 0.64 to 0.81 (MoMo App 5.0)

React Native · Android · Gradle

- Led the Android native migration; refactored Gradle configurations and native modules for compatibility.
- Eliminated critical React Native technical debt, enabling safer future upgrades.

KMP Design System

Kotlin Multiplatform

- Developed KMP component libraries for Android native features with consistent API contracts.
- Reduced duplicated UI logic by **40%**.

Design System V2 (React Native)

- Developed and maintained a shared component library with standardized APIs for reuse and design consistency across teams.
- Ran design reviews with Product Designers and ensured pixel-perfect implementation through release.

MoMo Design Platform (LLM-Powered Design System)

React · Vue · LLM agents

- Contributed to a web platform that uses LLM agents to generate production-quality code from design specifications.
- Ensured generated code strictly follows MoMo design-system conventions and component library standards.
- Built real-time mobile preview, design-to-code tracking, user surveys and exports (Figma, code).

SIDE PROJECT

HahaGo · Mobility Super App

React Native 0.81 · Re.Pack Module Federation · WebSocket · MapLibre · Firebase Cloud Messaging

- Built a ride-hailing and transport super app on a micro-frontend architecture: one host app loading independently built mini apps for bike/car booking, intercity bus tickets and vehicle inspection.
- Implemented realtime ride tracking over **WebSocket** with automatic reconnect, exponential backoff and booking state resync after reconnecting.
- Built a QR payment flow shared across services, confirmed through FCM push and re-checked when the app returns to the foreground.
- Set up shared packages (design system, API client, auth, permissions) and an MVVM structure with dependency injection for mini apps.

KEY STRENGTHS

Modern Android: Jetpack Compose, MVVM, Coroutines/Flow, Hilt.

Native depth: native modules, bridge and React Native fork-level work on Android.

Design to release: design reviews, implementation, Google Play release and post-release monitoring.

Accessibility & product thinking: inclusive features with real user impact.

EDUCATION

University of Science, VNU-HCM · Bachelor of Computer Science (Advanced Program) 2019 to 2024

GPA 3.1/4.0 · Thesis: Course Recommendation System (8.9/10), presented at ISDS Conference 2024

CERTIFICATIONS & LANGUAGES

IELTS (2024) · English: Professional Working Proficiency
